

Student Marks Manager – Project Report

Project Title: Student Marks Manager

Introduction:

Student Marks Manager is a web-based application designed to manage student marks efficiently using modern front-end technologies. The project focuses on simplicity, usability, and real-time interaction without using complex authentication or databases.

Objective:

The main objective of this project is to allow users to add student details, enter marks, automatically calculate grades, and display the results dynamically in a user-friendly interface.

Features:

- Add student name and marks*
- Automatic grade calculation*
- Dynamic display of student records*
- Simple and clean UI*
- No login or database required*

Technology Stack:

- *React.js*
- *JavaScript (ES6)*
- *HTML*
- *CSS*
- *GitHub for version control*
- *Vercel for deployment*

System Requirements:

Hardware:

- *Minimum 2GB RAM*
- *Any modern computer*

Software:

- *Node.js*
- *npm*
- *VS Code*
- *Web Browser*

Project Workflow:

- 1. User enters student name and marks.*
- 2. Application validates the input.*
- 3. Marks are processed using JavaScript logic.*
- 4. Grade is calculated automatically.*
- 5. Student data is displayed instantly on the UI.*

Deployment:

The project is deployed using Vercel and connected to GitHub for continuous deployment. Any changes pushed to GitHub are automatically reflected on the live website.
